Our Higher-Capacity Sliding Jack

Just like the JP-3 Sliding Jack Tray, the optional JP-6 sliding jack tray doubles your capacity to 6,000-lbs. and provides you with the space to lift your car off any [BendPak four-post lift](#), giving the same instant access to your wheels that you would have with a 4-post rolling bridge jack. If you have a four-post lift but want to be able to do wheel and suspension work—or any kind of tire and wheel maintenance—then this Sliding Jack Tray is the perfect utility for your shop.

The Sliding Jack Tray platform is ideally placed for use with bottle jacks (NOT INCLUDED) which lift your car off the runway and safely into the air. Thanks to the easy-slide design, the precision grooves allow the jack platform to be positioned anywhere under a vehicle, giving you the ability to easily access the lifting points of any vehicle in your garage.

The JP-6 is a must-have accessory for any shop with a four-post lift that can benefit from this easy adaptability. The heavy-duty and rugged construction of the JP-6 jack platform provides you with a stable and durable support for any vehicle up to its 6,000-lb. lifting capacity. (Bottle jacks not included.)

*Bottle jacks not included.

Features

- 6,000-lb. capacity
